## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments filed 04/19/05 have been fully considered but they are not persuasive. The Examiner has thoroughly reviewed Applicant's arguments but firmly believes that the cited reference reasonably and properly meets the claimed limitation as rejected.

Applicant's argument –The reference did not meet limitation of “wherein m is greater than the number of bits in each multibit digital segment value.”

Examiner's response – In this case, here  $m=8$  and 1 bit in each multibit digital segment value. Therefore, m is greater than the number of bits in each multibit digital segment value.

Furthermore, the applicant did not response to the double patent rejection as recited in the previous office action.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 21 is rejected under 35 U.S.C. 102(b) as being anticipated by Gorski-Popiel (US 4,426,712) (whereby x, m and n are interpreted to be any number including 1 and fraction).

Art Unit: 2634

As shown in figures 2-4b, Gorski-Popiel discloses a system and a method for operating a GPS C/A code receiver comprising:

A plurality of channel means (column 2, lines 50-62), each comprising, means (282) for forming  $x$  multibit digital segment values per C/A code period, each multibit digital segment value representing a sequential code segment of a received composite of satellite signals (column 4, line 20-column 5, line 39); and a plurality of correlating means for correlating each multibit digital segment value with  $n$  ( $=10$  here) satellite specific sets of  $m$  differently time delayed segments of C/A code modulation to form at least  $n$  times  $m$  time delay specific correction values (column 5, lines 35-60), where in  $m$  is greater than the number of bits (one of 8 bits) in each multibit digital segment value.

### ***Double Patenting***

4. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

5. Claim 21 is provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 2 of patent 6,724,811.

Although the conflicting claims are not identical, they are not patentably distinct from each other because the broader application claim 21 would have been obvious in view of the narrow issued claim 2 of the patent (see *In re Emert*, 124 F.3d 1458, 44 USPQ2d 1149), respectively.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

### ***Conclusion***

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
